

ANTI-MARKING SYSTEMS INC.

ANTI-MARKING “EZ” LOOP FILM JACKETS

Anti-Marking Systems Inc. also offers the Pearl-Tex® 21 materials in custom converted jacket forms that adapt to all Heidelberg press models and positions. These converted jackets utilize the original manufacturers clamping systems on the transfer and delivery positions and easily replace existing factory (and other aftermarket) products. We utilize specially formulated solvent resistant elastic materials, which not only allow “EZ” installation, but you can also use your existing hardware and it is simple to adjust the clearances with the use of packing without worry of damaging the original size characteristics. There are several designs available that will accommodate your printing and press application.

Pearl-Tex® 21 “EZ” Loop Anti-Marking Jackets

Available in three styles, AF-21 with a cross-backing or AF-21 or AC-21 (both without backing), these Converted Jackets adapt very easily to the transfer and delivery positions of all Heidelberg press models, are highly durable and have a long life. Installation takes just minutes. These jackets are also available with or without cross-backing to reduce or eliminate the need for packing.

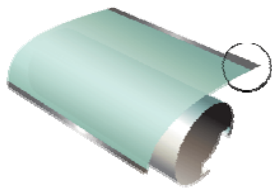

Pearl-Tex® PM Magnetic Anti-Marking Jackets for Perfecting “Reversing” Cylinders

Anti-Marking Systems Inc. Magnetic Jacket is the answer to the marking issues associated with the “Reversing” cylinder in perfecting press applications. These jackets are designed to be installed (and removed) in a matter of seconds with the use of magnetic strips attached at both the gripper and tail edges of the jacket. When your application requires a quick easy solution for non-perfecting jobs simply attach these jackets to the reversing cylinder and eliminate marking issues. The jackets are removed just as easily in a matter of seconds when your application requires perfecting. Available in the AF-21 and AC-21 materials, these Magnetic Jackets adapt to the “reversing” drum positions of all Heidelberg press models with perfecting units.

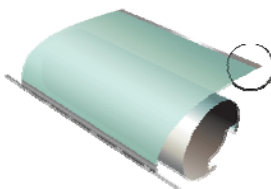

The Pearl-Tex® “EZ” Loop Anti-Marking Jackets are available for the following models and positions:

Heidelberg QM 46	Delivery Position
Heidelberg GTO 46 & 52	Transfer and Delivery Positions
Heidelberg SM & PM 52	Transfer and Delivery Positions
Heidelberg MO 65	Transfer and Delivery Positions
Heidelberg SM 72	Transfer and Delivery Positions
Heidelberg SM & PM 74	Transfer and Delivery Positions
Heidelberg SM 102	Transfer and Delivery Positions

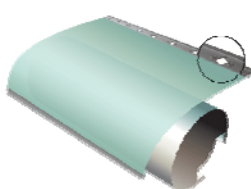

The Pearl-Tex® Magnetic Jackets are available for the “Reversing” cylinder in perfector models for all the above mentioned Heidelberg press models.
